

Delivering Mission Advantage Through Intelligent Automation

BridgePhase is a mission-focused technology partner positioned to deliver enterprise-scale solutions with small business agility. With deep operational experience across Defense and Homeland Security, we deliver proven AI, DevSecOps, cloud modernization, and cybersecurity capabilities that transition rapidly from requirement to mission-ready deployment. We combine domain expertise with flexible execution, delivering commercial velocity with weapons-grade security across all classification levels. We don't just understand federal technology requirements—we've built the platforms, secured the systems, and delivered the outcomes that accelerate agency transformation.

Core Differentiators

-  **Enterprise-Scale Mission Delivery:** Proven velocity on national-level, mission-critical systems across defense and civilian agencies. Operating platforms processing billions in secure transactions annually while executing continuous production deployments.
-  **AI-Driven Automation Excellence:** Embedding intelligent automation in large-scale production systems. Delivering preemptive threat response, self-healing infrastructure, and automated compliance that optimizes mission velocity and operational efficiency.
-  **Multi-Classification & Platform One Mastery:** Operating seamlessly from IL-2 through JWICS with deep Big Bang and Iron Bank integration enabling infrastructure-agnostic deployments. Compressing capability delivery from months to days through continuous authorization and hardened container expertise.
-  **Mission-Critical Performance Impact:** Demonstrated ROI delivering measurable operational savings while simultaneously improving speed, security, and user experience across defense and federal missions.
-  **Full-Spectrum Cyber Resilience:** Defending mission-critical infrastructure for no-fail environments relied on by thousands of warfighters and federal operators with automated threat detection and intelligent incident response capabilities.

Capabilities

AI, Automation & Data

Mission-focused artificial intelligence and intelligent automation solutions accelerating decision cycles and operational tempo while maintaining security compliance across all classification levels.

Cloud & Infrastructure

Zero-downtime migration and modernization of critical defense systems to resilient cloud-native architectures, ensuring mission continuity while achieving significant cost reduction and operational efficiency.

Integrated Cyber Operations

End-to-end cyber operations support delivering offensive and defensive capabilities with automated compliance validation, continuous monitoring, and risk management across multi-domain environments.

Digital Modernization & Software Delivery

Holistic DevSecOps implementation and custom application development enabling rapid, continuous capability delivery with automated security validation, modern software practices, and mission-specific solutions across all classification domains.

Solutions

Managed DevSecOps

Tiered Digital Automation

Custom Mission Apps

Our Impact

United States Air Force

Platform One: Continuous DevSecOps Platform Release

Delivered universal Big Bang DSOP across Cloud One, commercial, hybrid, and disconnected DoD environments with bi-weekly automated releases and testing framework continuously reducing CVE exposure.

Unified Platform: AI-Powered Threat Defense at Scale

Deploying AI/ML security operations across 134+ multi-classification environments supporting 7,000+ USCYBERCOM users with automated threat detection, self-healing infrastructure, and preemptive incident response enabling continuous authorization.

Kessel Run: Mission-Critical Software at Daily Velocity

Transformed Air Force software delivery from monthly to daily deployments with continuous ATO, delivering mission planning applications across global AOC locations generating \$500M in refueling savings and reducing lead time from months to days.

Department of Homeland Security

USCIS: AI-Accelerated Immigration Modernization

Modernized the Electronic Immigration System by converting a monolith into 100+ microservices supporting thousands of rapid deployments and constant policy changes. The result: 15M+ annual transactions, 300% faster processing, 22% reduced adjudication times, and \$25M in yearly savings powered by AI/ML automation.

DHS Headquarters: Enterprise AI Governance & Zero Trust Leadership

Established DHS-wide AI governance with automated LLM evaluation reducing assessments by 40%, while serving as Zero Trust PMO achieving 50% increase in mandate compliance and 35% reduction in manual processing through AI workflows.
