

TECHNOLOGY REFRESH PROGRAM

Schools are always struggling to keep up with the latest technology. New items become outdated in just a few years, and most districts lack the necessary funds to replace all technology equipment on a yearly basis - or even every few years.

With DALY Computers' Technology Refresh Program, school districts can craft a lease program to keep the latest technology in their classrooms. Instead of just purchasing IT products, with the Technology Refresh Program, districts get a packaged solution from Daly which includes:

IT Products at the most competitive prices

Products available for lease include desktops, laptops, workstations, servers, storage, networking and many more! The Technology Refresh Program can help with your 1:1 initiative goals.

24/7 Support from our Maryland-based help desk & call center

DALY experts help your own IT professionals if they need assistance. We will take care of all repairs and/or replacements.

Tracking Assets

DALY keeps track of all technology assets throughout the district, allowing school districts to quickly determine which school contains a specific item.

Equipment Removal

DALY removes all technology products from your location at the end of each year. All drives are sanitized to Department of Defense standards, so confidential information is not compromised. Electronic waste is recycled properly; none of it ends up in landfills.
