

**Incident Management Situation Report
Friday March 13, 2026 – 0730 MDT
National Preparedness Level 1**

National Fire Activity (March 6, 2026 – March 12, 2026):

Fire Activity and Teams Assigned	Totals
Initial attack activity:	Light (652 fires)
New large incidents:	25
Large fires contained:	27
Uncontained large fires:	8
CIMTs committed:	0
NIMOs committed:	0

Nationally, there are zero fires being managed under a strategy other than full suppression.

Fires not managed under a full suppression strategy or fires managed under a full suppression strategy but utilizing a combination of tactics – such as monitoring, confinement or point zone protection – achieve specific fire management objectives while balancing the most effective utilization of resources. Fires managed as described above are identified in the situational report as Comp fires. Additional information including definitions can be found in the [NWCG glossary](#) or [here](#).

[Understanding the IMSR](#)

[IMSR Map](#)

This report will be posted every Friday at 0730 Mountain Time unless significant activity occurs.

Southern Area (PL 2)

Fire Activity and Teams Assigned

Totals

New fires:	478
New large incidents:	21
Uncontained large fires:	6

* **Yellow**, Texas A&M Forest Service. Started on private land four miles northeast of Boys Ranch, TX. Brush and grass. Minimal fire behavior with creeping and smoldering.

* **440**, Florida Forest Service. Five miles west of Cross City, FL. Heavy slash. Extreme fire behavior with long-range spotting, running and group torching.

National, Big Cypress National Preserve, NPS. One mile southeast of Miles City, FL. Southern rough, grass and timber. Minimal fire behavior with creeping. Numerous residences threatened. Area and trail closures in effect. Reduction in acreage due to more accurate mapping.

Savannah, National Forests in Florida, USFS. Twenty-five miles south of Sumatra, FL. Timber. Minimal fire behavior with creeping. Residences threatened.

* **Old Bowling Green**, Florida Forest Service. Three miles north of Bowling Green, FL. Grass and southern rough. Minimal fire behavior with smoldering. Last report unless significant activity occurs.

* **Paul Murphy**, Georgia Forestry Commission. Four miles southwest of Moultrie, GA. Timber and grass. Minimal fire behavior. Last report unless significant activity occurs.

TOTAL ACRES:		17,233	1,177	7,341	23,711	446,188	26,936	522,585

Ten Year Average	Quantity
Fires (2016 – 2025 as of today)	6,821
Acres (2016 – 2025 as of today)	443,651

Cumulative acres shown in the Active Incident Resource Summary Table may not be reflected in the YTD statistics due to a lag in units completing YTD adjustments in the SIT/209 Application. Otherwise, changes in agency YTD fires and acres reflect more accurate mapping or reporting adjustments.

Predictive Services Discussion:

An atmospheric river will continue to impact the northern third of the West through tomorrow with valley rain and mountain snow. As the storm moves into the Plains tomorrow, breezy west to southwest winds today will become strong and dry tomorrow ahead of the cold front in the Southwest, Front Range, and central and southern High Plains. Wind gusts near or exceeding 60 mph are possible tomorrow as minimum relative humidity falls to 5-15% creating widespread elevated to critical conditions. Behind the front, improving conditions are likely along the Front Range into the central High Plains tomorrow night due to much cooler temperatures and scattered light snowfall. However, elevated to critical conditions are expected to continue across southern New Mexico into much of West Texas, including the Big Bend. The storm will bring heavy snowfall to the Upper Midwest as it moves eastward, with widespread rain into the Ohio Valley, Mid-Atlantic, and Northeast. Lighter rain is expected in the Southeast and Florida with localized relief, but breezy and dry northwest winds are expected behind the front early next week.

Next week, the atmospheric river will shift north into Canada as a very strong upper-level high builds over the Lower Colorado River. Record high temperatures are expected by mid-next week for much of the West, with many locations in the Southwest and southern California expected to record their earliest 100°F temperatures by several days, if not weeks. Winds will be light, but very low relative humidity of 3-15% will occur as well, with poor overnight recovery below 30% for many areas. The meager snowpack in the West is expected to melt rapidly under these conditions. With the ridge in the West, and northwest flow across the eastern U.S, temperatures will be below normal near the East Coast, but drier than normal conditions are expected to spread to much of the southern two-thirds of the country. In Alaska, colder and drier than normal conditions will persist through next weekend, while a Kona Low continues to bring heavy rain and strong winds to Hawai'i into early next week.
